CORPORATE OFFICE

COMPANY PROFILE

Kristeel-Shinwa Industries Ltd., a member of the KRISLON GROUP OF COMPANIES, was established in 1973. It was set up in technical collaboration with Shinwa Rules Company Limited, Japan, the largest manufacturer of stainless steel rules and measuring instruments in Asia.

KRISTEEL-SHINWA has the largest share of the Indian market and is the most preferred choice in the International market for Stainless Steel Precision Rules & Gauges. KRISTEEL has its headquarters in Mumbai & its state of the art manufacturing set-up is located at Silvassa. The factory is laid out to the collaborators exacting standards, with plant & equipments, imported from USA, Italy and Germany. Ongoing R & D, stringent quality control, inspection and constant up-gradation of plant and machinery makes KRISTEEL products the most preferred brand in Indian industry today.

Also mention worthy is the certification we have received for our precision measuring rules by the European Economic Community (EEC) for accuracy as per Class-I and II standards. We are also certified as ISO 9001-2008 company by TUV, Sudddeutschland Group, Germany and are now working towards following 6 Sigma Management practices.

Kristeel has been adhering to stringent international norms for each of its manufacturing processes. Kristeel aims towards '0' defect manufacturing through its Total Quality Management methods and attention to detail. Also, a strict Statistical Process Control System in each stage of the manufacturing process is followed. This ensures that there is no compromise in quality.

However, the point we are about to make here is not about what recognition we have received, but about where do we go from here.

...“In the pursuit of excellence, there is no finishing line”. This is a philosophy that permeates through every single member of the **Kristeel-Shinwa** family. Which is why, we have always tried to surpass our own achievements. Take for instance, our zero defect manufacturing, the class 10,000 clean room, TQM practices, ISO 9001-2008 certification, EEC-norm certification from **Ministry of Belgium, Metrology Department**.

Now, we are working with renewed vision, die-hard determination, incessant inspiration to do better than before, offering the customer unmatched precision, accuracy and reliability. We, at **Kristeel** have always believed about investing in latest technology by importing and updating our production capabilities with the latest machinery. We have just installed at our facility a state of the art Laser Etching machine from Germany. We can now deliver parts to our customers within 24 hours on receipt of their orders.

**SHEAVE GAUGE (8 LEAVES)
& SHEAVE GAUGE (SINGLE PIECE)**

This Gauge made in stainless steel, extremely useful tool for measuring wire rope & sheave wear, sheave maintenance by measuring sheave contour wear at the root, measuring the amount of wear at the groove wall & measuring the diameter of the wire rope.

Range of leaf Gauge:- 1/2", 9/16", 5/8", 3/4", 7/8", 1", 1-1/8", 1-1/4"
(8 Blades)
Range of Star Gauge:- 1/4", 3/16", 7/32", 3/8", 7/16", 5/16".

A. Sheave Groove Root Wear: - Wire rope will wear bottom of the sheave groove to a radius smaller than the radius of the sheave . To determine the amount of wear, place the proper size gauge in the sheave and shine a light behind the gauge. Light should not be detected between the gauge and the root of the groove. If wear is evident, the sheave should be re-machined or replaced.

B. Measuring Wire rope and Sheave Wear:- A properly machined sheave groove allows a wire rope to pass through unhindered by friction or obstructions. Sheaves should be checked periodically for wear in the grooves which may cause abrasion, pinching, and bird caging of the rope. If the groove shows signs of rope imprints the sheave must be replaced or re-machined and re-hardened. The correct size sheave is required to minimize wear and tear on rope or wire. When grooved become overly worn or are too large, they may allow excessive movement, which stresses the rope and reduces its longevity. Likewise, too small of a groove compresses the rope and reduces its useful life because the rope will roll into the sheave groove introducing torque and twist which may cause high stranding and bird-cages.
